1. Abstract:

Flash Deals and Sales is an e-commerce web application designed to provide users with a fast, simple, and user-friendly online shopping experience. Many existing shopping platforms are overloaded with unnecessary features, making it difficult for users to quickly find trending products and limited-time offers. This project aims to solve that problem by creating a lightweight platform focused on flash deals, discounts, and easy product browsing.

The application allows users to view products, explore categories, search for items, and purchase products through a secure and responsive interface. The system also includes user authentication and product management features for better usability and administration. The frontend is developed using React, HTML, CSS, and JavaScript to create an interactive and responsive user interface. The backend is built using Node.js to manage server-side operations and database communication.

The main objective of this project is to improve the online shopping experience by providing a modern interface with faster navigation and attractive deal-based product displays. The platform is designed to be scalable, responsive, and efficient for both users and administrators.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
Frontend Development	2520030497	
Backend Development	2520030415	
User Authentication & API integration	2520030415	
UI Design and Responsive Layout	2520030497	

3. Module Details:

A. Charanteja (2520030415) will be responsible for backend development using Node.js. The responsibilities include creating APIs, handling server-side logic, implementing user authentication, managing product data, and connecting the application with the database. The student will also ensure secure communication between frontend and backend modules.

D. Venkata Mahith (2520030497) will be responsible for frontend development and UI engineering. The responsibilities include designing responsive web pages using React, HTML, CSS, and JavaScript, implementing product display components, creating user-friendly navigation, and improving the overall user experience of the application.

Both team members will collaborate in integrating frontend and backend modules, testing the application, and ensuring smooth functionality across all features.

4. Frameworks / Platforms / Software Used:

- React.js
- Node.js
- HTML5
- CSS3
- JavaScript
- Visual Studio Code
- Git & GitHub
- Web Browser for Testing
